

Starting Up A Drupal 11 Site

To Create a Site

- 1. Head over to https://drupalforge.org
- 2. Click on **Demo Drupal 11 Launch button**
- 3. Answer the math question and click **Express Launch.**
- 4. When the site is ready, click on **Login URL**. Your username and password is **devpanel**.
- 5. The site will launch and you can log in.

Saving the environment and lengthening the time remaining

- 1. Return to the main page with **your information** on it.
- 2. Click Save.
- 3. The **easiest and by-far best option** is to log in with a Google account either a personal or business account. Signing up with an email/password combination takes much longer and the emails will likely end up in your spam folder.
- 4. Once you log in, you'll be returned to the main page.
- 5. Click on the LAUNCH button for Drupal 11 Demo again and **click Save AGAIN**. This adds the site to your account. (They're working on making this far easier).
- 6. You can see all your sites by clicking on the MyApp button at the top right.

7. On the right hand side, click on **Actions**, then **Workspace**. You'll end up at a screen that looks like this:

DevPanel 🖁	Workspaces	品 Clusters	Templates					0 0	6

There is a **ton of information** on this page. **You only need to use the information at the five numbers:**

- 1. This is to pause and unpause your application. Since you're logged in, you can keep this for 30 days but it pauses when the clock (in #3) runs outs.
- 2. This is the link to your application. The username and password is "devpanel".
- 3. This is the application timer. Clicking on it will give you extra time, up to 12 hours total per day. Click enough times to ensure uninterrupted site building during training.
- 4. Click the copy button to copy the password for the development environment.
- 5. Click to launch VSCode in a browser for Composer and Drush access.
